

P3fax is the latest web based fax and messaging server from Wordcraft International and is just one of the Unimessage P3 modules. This powerful new version brings you straightforward and cost effective management over the transmission and reception of fax and other documents within an office environment.

The most cost effective way to send and receive faxes is electronically, straight from your desktop. P3fax can be used with an existing e-mail application or with P3console (desktop tool).

### User Features

P3fax is an ideal solution for fax broadcasting, whether from a mail-merge or through applications like SAP, any company address book including personal e-mail address books can be used.

P3fax will provide these benefits as a standalone product, however as an integrated module with P3ocr and P3doc together they provide centralised and controlled workflow management of all documents around the office.

With P3fax a document can be automatically routed to a pre-specified destination based on a DDI number, fax ID, name etc.

Embedded commands are an additional feature to give you more control when sending and creating faxes.

### Technical Features

P3fax supports a distributed architecture - fax devices can be located on many servers. The simplest solution is to have a faxmodem attached to the P3fax server, however, if necessary, you can connect many servers hosting different fax devices. Any of these device types can be connected to a P3fax system: Class 1 and Class 2 faxmodems; CAPI 2.0 compatible ISDN fax cards.

P3fax can be managed from anywhere on the network using a web-browser interface. Once set-up, however, there is very little technical management involved as there is no software which needs to be installed on the user's workstation. The simplicity of P3fax means that there is little overall maintenance required.

### Further Information

Make sure you have the latest in MFP communication, messaging and management solutions. For details on how to purchase P3fax visit our website on [www.wordcraft.com](http://www.wordcraft.com).
