Updated icon driven interfaces	Cleaner viewer controls, friendlier looking web interface
Smoother device options set up	Change the setup of your device through an easy web page layout
License structure supports channels rather than devices	Unlimited device support across one channel/fax line.
Unlimited e-mail devices**	Add as many new P3fax email devices to your network as you desire.
Provides web based email without the need of third party server such as hotmail or Gmail using your current ISP/web servers	Get your email wherever you are via a web browser,
Use Embedded commands within Emails as well as print capture.	Allows you to use Wordcraft's unique and popular Embedded commands functions from any computer via any email client.

## Reasons to upgrade UnimessagePro with UnimessageP3fax

Supports CAPI 2.0 using multiple channel licences as standard	Simplified purchasing of CAPI 2.0
Uses Wordcraft latest drivers including 32-bit class 2 and multi-threaded email driver	Supports more up to date devices and speeds
LDAP Phonebook	Contacts created in P3fax can be accessed by any LDAP compatible application such as Outlook, allowing for a central store for contacts for all your messaging applications.
Supports SMTP Authentication for emails	Send email via a secure SMTP server.
Improved support for HTML emails	View your HTML messages as the sender intended with images loaded within the body of the message.
Improved file format support	View your fax as a PDF or TIFF at the touch of a button.
Archive to PDF and other formats as standard	No need to purchase additional archiving software.
All new drag and drop viewer	Re-order pages of your faxes/documents easily
Print several times only creating one document/fax	Merging many prints easily into one fax saves money sending them separately to the recipient.
One click scanning	Speed up scanning times
Viewer integrates with other image editor software	Allows you to edit your faxes within your favourite image editor.
Configure network folders for specific groups of users to see.	Allows you to create folders that can be shared between groups of contacts such as departments.
Licenses can be upgraded (add more users/channels) without the need to restart P3fax.	Add new users/channels to your licence without interrupting people sending/receiving on the system.
Hold check box in new message dialog	No need to enter properties dialog to put message on hold.
User requested feature: delete message while viewing	No need to close your viewer to delete the message
User requested feature: find in list	Allows you to find messages quickly which are displayed in your current view.
User requested feature: select your email account from the new message dialog.	Change from your default email account while typing your message for ease of sending a message from a different account.
Time intervals between retries and retry counts available in system	Easy to edit time intervals and retries through web interface.

## Reasons to upgrade UnimessagePro with UnimessageP3fax

menus.	
Local user settings are stored on the server and not in the windows registry.	No longer need to input user dependant name and address fields when you change computer.
Enhanced Routing – Routing rules can now be applied to every message, every shared message or every personal message.	Every message can be archived (or have other actions applied to it) with one single rule.
Processing of messages, routing rules and OCR are all done on P3fax server not clients.	Keeps your lower specification client(s) running uninterrupted.
Use of the latest ABBYY OCR software in P3ocr	Provides a vast improvement in the quality of OCR results.
Improved automatic routing of OCR'd faxes	P3ocr provides a vast improvement in the quality of results.
OCR engine supports PDF, XLS, RTF, TXT, HTM output formats.	Provides you with the option to open your results easily in a variety of other applications.
Choose between speed and accuracy on OCR settings	Option to increase speed of OCR engine if images are of high quality
Optional OCR profiles	Allows you to customise your OCR settings on a per document bases improving language support and output format selection.
Email notification of job success/failure in P3fax and Gateway	No need to check in Unimessage P3 for the progress of your job when the result can be emailed to you
Automated monitoring of folder or email account for new jobs via P3gateway	Allows you to copy images into monitored folders or attach them to email messages for processing by P3gateway
P3gateway can output jobs to a folder, send out via email or via P3fax	Flexible easy way to access your processed documents
Converts spool files or image formats to PDF or Tiff	Easy conversion of documents to popular formats
Improved handling of different languages	E,g European, Japanese, Chinese character sets improved.
P3gateway supports a greater range of input formats (PRN, TIFF, JPG, PNG, BMP, PDF***)	No need to print files to a PCL print, P3fax gateway will email and fax converting the image file directly. (PCL printing is still supported)

\* Browser must be Internet Explorer 6 or higher equivalent browser. (uses Java)

\*\* I-netportal devices count as an always on device. 1 device logged on equals one channel always in use.

\*\*\* Coming soon

P3gateway included as standard with P3fax.
